

Measure Description

The percentage of members 40-75 years of age during 2025 with diabetes, who do not have clinical atherosclerotic cardiovascular disease (ASCVD) and met the following criteria:

1. **Received Statin Therapy:** Members who were dispensed at least **one** statin medication of any intensity during 2025.
2. **Statin Adherence 80%:** Members who achieved a proportion of days covered (PDC) of at least 80% of the treatment period on a statin medication of any intensity during 2025.

Members with diabetes are identified by claim/encounter and pharmacy data during 2024 or 2025.

Definitions

Index Prescription Start Date (IPSD): The earliest prescription dispensing date for any statin medication of any intensity during 2025.

Treatment Period: The period beginning on the IPSD through December 31, 2025.

Proportion of Days Covered (PDC): The number of days the Member is covered by at least one statin medication prescription of appropriate intensity, divided by the number of days in the treatment period.

- Calculating number of days covered for multiple prescriptions:
 - Multiple prescriptions for different medications dispensed on the same day: calculate the number of days covered by a statin using the prescription with the longest days' supply.
 - Multiple different prescriptions dispensed on different days with overlapping days: count each day in the treatment period only once.
 - Multiple prescriptions for the same medication dispensed on the same day or on different days – add the days' supply and use the total to calculate the number of days covered by a statin medication. Subtract any day's supply that extends beyond December 31, 2025.
-

Follow the steps below to calculate the PDC for Statin Adherence:	
Step 1	Identify the IPSD (the earliest dispensing event for any intensity statin medication during 2025.)
Step 2	Determine the treatment period; calculate the number of days beginning on the IPSD through December 31, 2025.
Step 3	Count the days covered by at least one prescription for any intensity statin medication during the treatment period. Subtract any day's supply that extends beyond December 31, 2025.
Step 4	<p>Calculate the PDC using the following equation:</p> $\frac{\text{Total Days Covered by a Statin Medication in the Treatment Period (Step 3)}}{\text{Total Days in Treatment Period (Step 2)}}$ <p>Convert to percentage by multiplying by 100 and round (using the 0.5 rule) to the nearest whole number.</p>
Statin medications:	
High-Intensity Statin Therapy	Atorvastatin 40-80mg, Amlodipine-atorvastatin 40-80mg, Rosuvastatin 20-40mg, Simvastatin 80mg, Ezetimibe-simvastatin 80mg
Moderate-Intensity Statin Therapy	Atorvastatin 10-20mg, Amlodipine-atorvastatin 10-20mg, Rosuvastatin 5-10mg, Simvastatin 20-40mg, Ezetimibe-simvastatin 20-40mg, Pravastatin 40-80mg, Lovastatin 40mg, Fluvastatin 40-80mg, Pitavastatin 1-4mg
Low-Intensity Statin Therapy	Ezetimibe-simvastatin 10mg; Fluvastatin 20mg; Lovastatin 10-20mg; Pravastatin 10-20mg; Simvastatin 5-10mg

Tips and Best Practices to Help Improve Performance

- Include the following topics in your discussions with patients who are prescribed statin medications:
 - Importance of statin medication adherence and lifestyle modifications (diet, exercise, weight loss)
 - Side effects such as muscle pain and what to do if they occur
 - What to do about missed doses
 - Identify barriers that would impact adherence to statin therapy
- Once the patient demonstrates that they tolerate statin therapy, prescribe a 90-day supply
- Utilize the monthly Gaps in Care (GIC) Report for a list of MVP Members and the services they still need
- Consider using alerts and flags within the Electronic Health Record (EHR) for screening tests
- Discuss the importance of early detection and encourage preventive care
- Document preventive care, medical, and surgical history in the medical record with specific date and results
